D5.14 TOOLBOX V1 INTEGRATION BEFORE FIELD TEST

PRACTICE WP5 deliverable

Dissemination level: RE

Nature: Prototype

UNCLASS

1. Executive Summary

This document describes the V1 version of the Toolbox before test and evaluation during the exercises.

As the implementation of the Toolbox is **an iterative process**, this V1 version will be updated over time.

As with V0, the Toolbox itself encompasses both the FRAMEWORK and the CONTENT.

The FRAMEWORK is basically a CMS (Content Management System) with specific features that are improved from V0 to V1.

The CONTENT contains mainly some existing Tools from V0 and is complemented in V1 with new and other existing Tools (see the list in Annex).

This document describes the process related to the V1 version of the Toolbox as well as its content. It lists the functionalities so far and the Tools that are integrated as well as the Tools that will be integrated in further iterations and presents also the potential extensions.

It describes the Toolbox content, each tool and the Toolbox itself as well as its usage.
