1. Executive Summary

This document describes the V0 version of the Training kit. This Training kit has been produced on the basis of the Toolbox V0. It is focussing on the key elements that have been developed to use the Toolbox for Training purposes.

This initial implementation set the ground for further developments to provide the Toolbox with Training capabilities.

It will be completed by Training materials from each tool as they will be introduced in the Toolbox as well as standard Training material for the Toolbox usage itself (tutorial) and further Specific Training Tools and set of tools to be introduced prior to the Exercise related to Training capabilities evaluation in UMEA Sweden.

This Training kit is an integrated part of the Toolbox being developed.

It will be further developed through the inputs and the feedbacks of specific Trainees that will feed the Toolbox with Training material / knowledge and test and provide feedback for the next iteration of the development.

This period will start end of November 2013. As new trainees for new exercises (after UMEA Sweden, Pionki in Poland) will be identified, the iterative feedback and improvement of the Training Kit will go on.
