D5.16 TOOLBOX V1 INTEGRATION AFTER FIELD TEST

PRACTICE WP5 deliverable

Dissemination level: RE

Nature: Prototype

UNCLASS

1. Executive Summary

This document describes the V1 version of the Toolbox after test and evaluation during the exercises. It is the follow up deliverable to the D5.14 that describes the Toolbox V1 before the exercises.

As the implementation of the Toolbox is **an iterative process**, this V1 version is the result of updating over time.

This document is therefore a complement to D5.14 document focussing on the changes after test, evaluation and feedbacks.

2. Introduction

This version of the V1 Toolbox is learning from the V1 implementation and initial review, and mainly integrating the Improvements asked for after the feedbacks from Pionki exercise in particular.

The integration of Tools and their interfacing has been a key achievement of the Toolbox V1. It has been tested and evaluated, as Tools have been integrated especially for the exercises and suggested changes to the Toolbox V1 and the Tools are presented below.

Furthermore, after the last exercise a few simple but useful functionalities were added to the Toolbox proper.

3. Implementation

In parallel to the Toolbox Framework improvement, Tools are being updated and adapted for better integration.

This iteration is the last one on the PRACTICE Toolbox.

At this stage the toolbox will be ready for further expansions and developments especially through the EDEN project, taking into account the recommendations of the D5.20 after the various feedbacks.

In particular, the main components of the concept will be enhanced and further developed.
