D7.6 V1 TRAINING KIT AFTER EVALUATION THROUGH “IN FIELD TEST”

PRACTICE WP7 deliverable

Dissemination level: PU

Nature: Prototype

UNCLASS

1. Executive Summary

This document describes the V1 version of the Training kit after update. This Training kit has been produced on the basis of the Toolbox V1. It is focusing on the key elements that have been developed to use the Toolbox for Training purposes.

This Training kit is an integrated part of the Toolbox being developed.

It has been further developed through the inputs and the feedbacks of specific Trainees during the exercises.

2. Introduction

Within PRACTICE the WP7 corresponds to the implementation of the Training Kit to be used in WP6. Besides the Training Tools that have been developed or updated and have been integrated in the Toolbox, the Toolbox has been further improved to provide Training capabilities by itself.

The Stakeholder Workshops that have been taking place during the various exercises have been opportunities to demonstrate these capabilities.

This document describes the final version of the Training capabilities of the Toolbox, be it the Toolbox itself or the Training tools integrated in the Toolbox. It is a complement to the D7.4 document describing only what has been updated after the feedback from the Pionki and Sandö exercises and workshops.

3. Training Kit Updates

3.1 Training for the Toolbox

As the Toolbox itself has changed and evolved, the Basic Guide to learn how to use the Toolbox has been updated. It is described in the D5.17 deliverable.

Furthermore Tutorials directly accessible in the Toolbox describing various functionalities of the Toolbox have been updated.
