D7.7 RECOMMENDATIONS FOR FURTHER EVOLUTION, EXPLOITATION AND UPDATE (TRAINING KIT)

PRACTICE WP7 deliverable

Dissemination level: PU

Nature: Report

UNCLASS

1. Executive Summary

This document describes Recommendations for further evolution, exploitation and update of the Toolbox for Training.

2. Introduction

This documents describes the recommendations for further evolution, exploitation and update of the Toolbox for Training purposes.

It gathers elements on the Toolbox itself, its concept and implementation, as well as on the Tools developed and / or upgraded during the project.

It takes into account in particular the feedback received and experience acquired from the various exercises.

This document present also the Exploitation and "business plan" for each of the components.

3. Recommendations for further developments

3.1 The Toolbox for Training

3.1.1 The concept for Training

The Toolbox is intended as a training tool for CBRN crisis management planning and response activities, i.e. the operational functions defined at the beginning of project PRACTICE. In connection with the Training Kit evaluation exercise in Sweden we have once more seen that such an easily accessible and versatile e-learning tool is much sought after by First Responders. The training functions in the Toolbox for practical/operational aspects of CBRN response have been complemented with a theoretical course that provides the knowledge base for operational best practice.

By means of the Swedish exercise and several stakeholder workshops the toolbox has demonstrated its potential for Training, not only through the specific Training Tools that it integrates, but more generally when used in "training mode". The training capabilities would however be further improved by

- Enhancing the decision support capabilities through further integration of the Scenarios.
- Facilitating the running of the Training and in particular the reporting of the actions.
